

## Cloud SIEM Made Easy For MSPs

**Time to security is more critical than ever to quickly detect and contain threats.** Blumira's platform and detection engineers enable your existing helpdesk to respond to threats faster.

### Simplify & Automate Threat Protection

No hardware to deploy. No security expertise necessary. With Blumira's platform, you can get up and running in minutes, not days and weeks — using your existing team and infrastructure.

### Benefits of Blumira:

- ▶ **MSP-friendly** - Free for internal use licensing, multi-tenancy, monthly billing
- ▶ **Replace your SOC** (security operations center) - automate manual triage and response
- ▶ **Lower TCO** (total cost of ownership) - all-in-one platform priced per user (not data or endpoints)
- ▶ **Access to security experts** - responsive support included; acts as an extension of your team

### Detection

#### Monitor and detect real threats

- Get meaningful findings on real threats to reduce alert fatigue
- Easy-to-understand remediation instructions
- Coverage across on-premises and cloud; track trends with security reports

### Response

#### Enable your team to quickly respond

- Block known threats with automated responses
- Easily remediate with playbooks for every finding
- Rely on Blumira's security team for further assistance

### Expertise

#### Gain access to security expertise

- Get security advice from Blumira's responsive security team
- Get help with onboarding, deployment, integrations and rule management
- Get advanced support for incident response, triage and investigation

### Easy, Fast Security

*"Blumira was literally the only vendor to check every box from ease of installation, support, actual technical delivery, and cost. We are all in with them as our security monitoring vendor and couldn't be more pleased."*

-- Bob Waltenspiel, President and CEO of Team Trinet

### Comprehensive Coverage of Real Threats

Blumira leverages threat intelligence and behavioral analytics to detect attacks in progress early so you can prevent a data breach. Examples include:

- ▶ **Ransomware** - Blumira detects ransomware attacks in progress through any of the threats listed below, then enables you to respond faster to prevent a breach
- ▶ **Windows** - For MSPs running on-premises RMM/PSA, you can easily monitor threats found across Windows servers, Exchange, Active Directory and more to protect your full Microsoft stack.
- ▶ **Endpoint** - Detect and stop malware, unknown applications, and compromised processes running on devices within your network
- ▶ **Cloud infrastructure** - Identify common misconfigurations, compromised cloud instances, security group changes and more
- ▶ **Identity** - Stop fraudulent system login attempts, monitor user access from suspicious locations, phishing, and indicators of stolen passwords
- ▶ **Email & documents** - Detect and stop business email compromise, account takeovers, external document sharing, anomalous email forwarding

### 3-Step Rapid Response:

- 01 Automated Response** - Block threats immediately through Blumira's platform, reducing manual remediation
- 02 Playbooks** - Get playbooks for every alert written by security experts for steps on how to respond
- 03 Security Expertise** - Blumira's responsive security team is on standby to answer questions, triage & help with incident response

### Simplifying Security

*"Blumira cuts through the cloud of complexity and helps administrators of different skill levels make good decisions while encouraging focused attention on the proper threats."*

- Daniel Heidt, GM
